

# **EXPRESS - TITLES**

REAL-TIME TV GRAPHICS FOR NEWS BROADCASTING AND CHANNEL BRANDING

#### **CAPABILITIES**

**Express-Titles - graphics workstation for template creation for** graphics and information playback: TV news, «Live», HD/4K Giant screens, weather forecasts and schedule boards, etc.

#### **Automation**

Playback of graphics compositions up to schedule of Express-Titles or by connecting to automation system in control room through CII/Oxtel protocol and other. VANC reader option provides automatic temperature sensors. control of graphics composition playback on the air on VBI SCTE104 commands.

Supported systems: PebbleBeach 
 AVECO 
 Harris

Supported protocols: CII • Oxtel • MOS • VBI SCTE-104

NewsRoom interfaces: Dalet 
 Octopus 
 iNews

#### **Our clients:**

«100TV» • «RBK-TV» • «Belteleradiocompany» • «Zvezda» • «NTK»

«Ugra» • «ONT» • «1M.TV» • «Saint-Petersburg»

«Russian children and youth TV channel «Karusel» expresses gratitude to all INTV personnel for help in organizing hidden subtitling system.» N.A.Dubovoy, General manager.

#### **Control panel**

Simple and reactive GUI to control all graphics templates. Playback of all compositions using mouse button, hot keys from keyboard or by commands from automation systems.

Database of News Data sources effects creation and its trimming. sections.

Preparation

#### **TV** bridge

#### «Picture in picture»

Formation of several scale «live» video windows with video files or external SDI sources. Multi codecs, supports alpha-channel video. Possibility to add transformation and border effects.

#### Voting

#### «Rating» and «Metropole»

Graphical rendering of voting results in pie or chart diagrams. Connection to voting systems by Metropol software and updating data in real time. 2D and 3D diagrams mode with different functions of its transformation.

#### **Additional options:**

- Time, data, countdown timer up to event
- Audio player with synchro-start of graphics templates
- Four channel graphics •
- Automatic receive of exchange rate
- Yandex.Weather and Yandex.Traffic data collection
- News crawl data automation

#### **Dictionary and spell** Information content checking Manually added or automatically received data from different

sources such as NewsRoom, external databases, on-line web sites, etc. Connection to

- Data sources:
- NewsRoom xml sources
- Temperature sensors

A spell checking option verify all used words in a database and in a text objects of template editor and in case of mistake offers new correct word. It uses internal dictionaries and allows to create a user's dictionary with most usable words.

> Supported types of character encoding:

ISO8859-1
 UTF-8
 KOI-8r

## **EXPRESS - TITLES**

#### **Template designer**

rendering and of graphics templates using graphics sequences and internal functions. Quickly correction of templates during the transmission. Comfortable GUI and timeline for

#### Database

Creation and editing of internal database on different sections, allows to add necessary amount of rows and columns to table and to format table information, using text and graphics data.

Database storage in \*. xls format. Multilanguage (unicode support).
